REZNOR

REZNOR UBZ SEPARATED COMBUSTION HEATERS

Made in U.S.A. Model UBZ gas-fired, separated combustion, high-static blower fan, 82 - 83% thermal efficiency, commercial/industrial unit heaters are great for space heating applications. These models use outside air for combustion to prevent dirt, lint, dust or other contaminants in the indoor atmosphere from being burned. Each size cabinet is easily suspended from four suspension points. The low voltage terminal strip on the outside of the cabinet makes connecting control wiring easy with no panels to remove. The addition of terminal G to the strip, along with the new design of the circuit board, allows for fan only operation (without adding relays). Integrated circuit board with 7 segment display, external status indicating LED, Tcore titanium stabilized aluminized steel heat exchanger, Patented single burner combustion system including a one-piece burner assembly, vibration/noise isolated fan and venter motor - designed for low noise operation.

Reznor Heaters

REZNOR

REZNOR UDX UNIT HEATERS

Made in U.S.A. Model UDX gas-fired unit heaters are great for space heating applications. These units are power vented to eliminate heat losses up the flue pipe. Each size cabinet is easily suspended from either two or four suspension points. Or, an optional hanger kit for Sizes 30-125 allows for ceiling mounting. The low voltage terminal strip on the outside of the cabinet makes connecting control wiring easy with no panels to remove. The addition of terminal G to the strip, along with the new design of the circuit board, allows for fan only operation (without adding relays). Integrated circuit board with 7 segment display, external status indicating LED, Tcore titanium stabilized aluminized steel heat exchanger, Patented single burner combustion system including a one-piece burner assembly, vibration/noise isolated fan and venter motor - designed for low noise operation.
